

HOW TO ORDER

KFR	25	B	J	2	100
Product Code	RATED POWER	PACKING	Toleranc	No. of Total Character	Resistance Value
KCF: CARBON FILM RESISTOR	12 1/6W	T52 :TAPE/BOX T73: TAPE/BOX	F +1% J+5%	100=10R=2	100=10R
KMF:METALFILM RESISTOR	25 1/4W	B: BULK		100R=101=3	100R=101
KRSF:METAL OXIDE FILM RESISTOR	50 1/2W	R: TAPE REEL		10K=1000=4	10K = 10,000
FKNP:KNP WIRE WOUND FUSIBLE RESISTOR	12 1/6W				
NKNP:WIREWOUND RESISTORS(Non-Inductive)	125 1/8W				
KFR :FUSIBLE RESISTOR	100 1W				
CR-M:SQM CEMENT RESISTORS	200 2W				
CR-L:SQP CEMENT RESISTORS	1WS 1WS				
	2WS 2WS				
	500 5W				
	700 7W				

1. GENERAL INSTRUCTION:

1-1 SCOPE

This specification applies to the Fusible Resistor made by PROAN Electronics Co., Ltd

2. NOMINAL RESISTANCE:

The nominal resistance shall be the resistance marked on the resistor body and identified, as a rule, in units, Ω , $K\Omega$, $M\Omega$.

3. NOMINAL RESISTANCE TOLERANCE.

The nominal resistance tolerance is represented in one capital letter selected from G($\pm 2\%$), J($\pm 5\%$), K($\pm 10\%$).

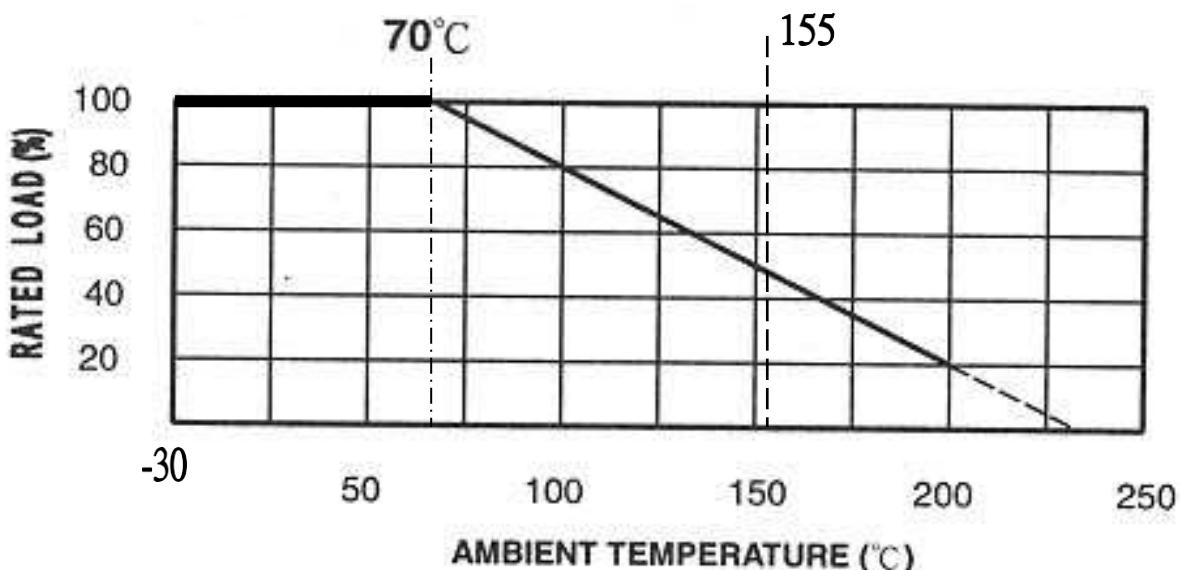

4. RATING:

STYLE	MAX WORKING	MAX OVERLOAD	Dielectric Withstanding Voltage (AC)	RESISTANCE VALUE RANGE
FR1/4W	200V	250V	250V	0.1E—1K
FR1/2WS	250V	300V	300V	
FR1/2W	250V	300V	300V	
FR1WS	300V	350V	350V	
FR1W	300V	350V	350V	
FR2WS	350V	400V	500V	
FR2W	350V	400V	500V	
FR3WS	400V	500V	500V	
FR3W	400V	500V	500V	

4-1. POWER RATING

Power rating is defined as maximum power rating, continuously applied under ambient

temperature exceeds 70°C, use chart 1.

4-2 .RATED VOLTAGE

Rated voltage is defined as the DC or AC (effective)

Value at commercial frequency example 50 C/S, 60 C/S)

Voltage when rated power is applied and can be calculated

By the following EQUATION $E = \sqrt{P \times R}$

E=RATED VOLTAGE

P=RATED POWER (WATTS)

R=NOMINAL RESISTANCE VALUE (OHM)

When the calculated rated voltage exceeds the

Maximum usable voltage shown in CHART 1, the

Maximum usable voltage is defined as the voltage

According to the power-decreasing curve shown in CHART1.

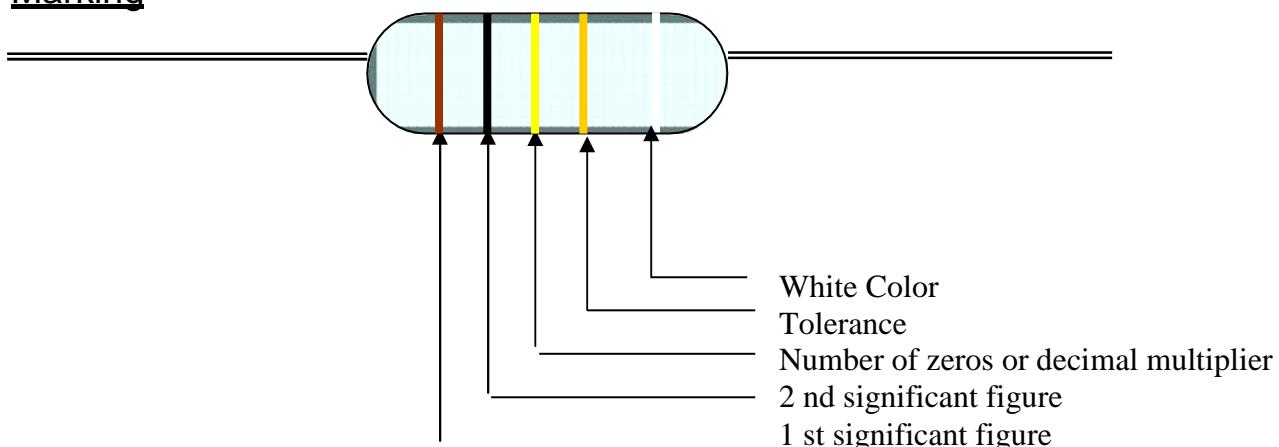

4-3. POWER

POWER	Fusing Time
	Maximum
16xwattage	1 Min.
20	40sec.
24	30sec.
28	20sec.
32	15sec.

NOTES:

After voltage the variable rate of resistance in excess (over) 100 times is open; Operating Temper Range -30C,.. 155C.

ITEM (STANDARD)	PERFORMANCE AND/OR QUALITY ACCEPTANCE	TEST METHOD
Resistance value Vs temperature characteristics	±200PPM/°C	JIS-C-5202 5.2 Measure resistance (R_0 ohm) at room temperature (T_0 °C) Measure again the same at 100°C higher than room temperature $\frac{R - R_0}{R_0} \times \frac{1}{10^6} \text{ PPM} = \frac{(T_0 + 100) - T_0}{(T_0 + 100) - T_0}$
Short time overload	The resistance variation shall be with in ± (2%+0.05ohm)and there shall be no mechanical breakage	JIS-C-5202 5.5 Apply DC voltage 2.5 times the rated voltage for 5 seconds. The leave at room temperature for 30 minutes then measure Max overload voltage 0.50W—400V(DC)
Insulation resistance	10,000M ohm or more	JIS-C-5202 5.6 Lay the resistor on 90° angle metal V block, apply 100 V DC between resistor lead and V block for one Minute And measure
Voltage endurance	The resistance variation shall be with in ± (1%-0.05ohm)and there shall be no mechanical breakage	JIS-C-5202 5.7 Lay the resistor on the 90° angle metal V block and apply rated AC voltage for one minute. Test voltage
Terminal strength	Resistance variation shall be with in ±(1%+0.05ohm) also there shall be on mechanical breakage	Pull test: apply 2.5kg.force to the lead in the direction of lead axis for 30±5 seconds.
Heat resistively against soldering	Resistance variation shall be with in ± (1%+0.05ohm) also there shall be no mechanical breakage	JIS-C-5202 7.10 Dip the lead into a solder bath having a temperature of 350°C±10°C up to 4±0.8mm from the body of the resistor and hold it for 3±0.5seconds leave the resistor at room temperature 3 hours after test, then measure.
Solder ability	More than 95% of the surface of the lead shall be covered by new solder after the leads are dipped in the solder	JIS-C-5202 6.5 Dip the lead into a solder bath having a temperature of 260°C±5°C up to 4±0.8mm from the body of the resistor and hold it for 5±0.5 seconds then inspect.
Load test	The variation of the resistance shall be with in ±(5%+0.05ohm) also there shall be no mechanical breakage	JIS-C-5202 7.10 In the constant temperature chamber having temperature 70°C±2°C,apply rated DC voltage for 1.5 hour and shut voltage for 0.5 hour and repeat this cycle for 1000 hours. Leave in room temperature 1 hour after test. Then measure.
Humidity load test	Resistance variation be with in± (5%+0.05ohm) also there shall be no mechanical breakage	JIS-C-5202 7.9 In temperature chamber having temperature 40°C± 2°C ,relative humidity 90—95%,apply rated voltage 1.5 hour and shut voltage 0.5 hour repeat this cycle for 1000 hours, leave in room temperature for 1 hour after test, then measure.

5. Marking

Color refer

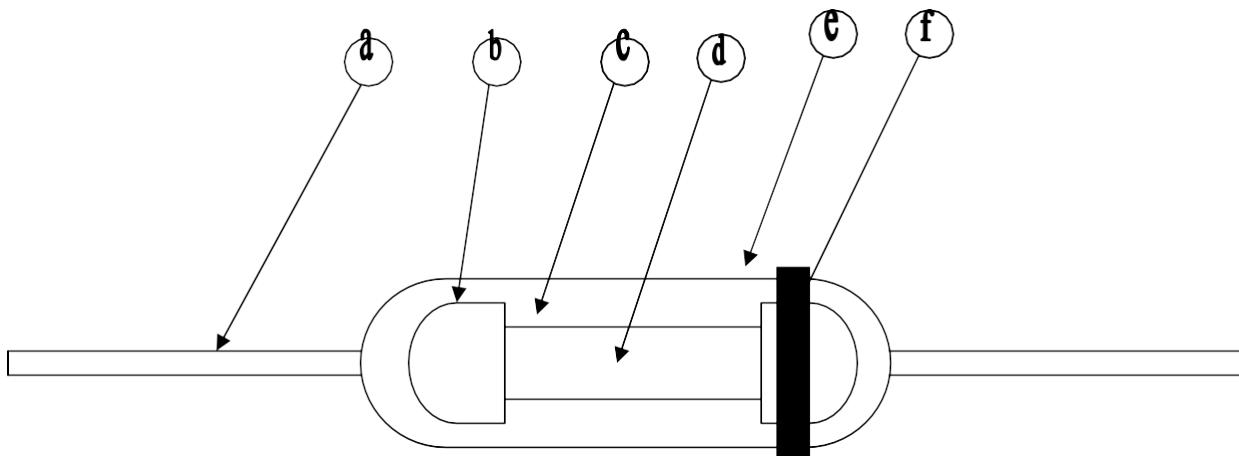

Color	1 st Band	2 nd Band	3 rt Band	4 th Band	5 th Band
Black	0	0	10^0		
Brown	1	1	10^1
